WORK EXPERIENCE

BLACK FOREST GAMES, 10/2022 - PRESENT

Gameplay programmer

Games: [Reanimal](#), [Gothic 1 Remake](#), [South Park: Snow Day](#), and [TMNT: The last Ronin](#)

Gameplay programmer working primarily in Unreal Engine (C++ and Blueprints), contributing to internal development and external partner projects. Worked closely with designers and fellow engineers to implement, iterate, and maintain gameplay systems across multiple productions.

- Implemented combat and interaction systems in Unreal engine MASS Entity (ECS) framework for **TMNT: The Last Ronin**, improving feature stability and supporting AA production goals.
- Built rapid prototypes using C++ and Blueprints for internal concepts and publisher pitches, shortening feedback cycles and validating gameplay ideas earlier in production.
- Assisted external partner studios, implementing gameplay and UI features, resolving bugs, and completing production-critical tasks to support release deadlines.
- Implemented UI features in UMG, among them a modular loading screen system that adapted to narrative context and supported modding via AngelScript.
- Worked with console SDKs across PlayStation, Xbox/Xbox Play Anywhere, and Switch 2 environments to support platform-specific development.

BRAVE ZEBRA, 12/2020 - 11/2021

Gameplay programmer

As part of a small indie team, contributed across multiple gameplay and systems areas.

- Implemented gameplay systems, AI behaviors, and Photon PUN networking for [Endeavour](#), a Unity online multiplayer game, contributing to core playable functionality.
- Implemented UI, gameplay mechanics, and the quest system for [War Bands](#), a 2D turn-based RPG developed in Unity with C# scripting.
- Provided support for [Endling - Extinction is Forever](#), implementing several HUD and UI Elements using Unreal engine and UMG.

INDRA SISTEMAS, 01/2018 - 06/2018

Software Engineer Intern

- Designed and implemented automated test suites that improved codebase quality and reduced regression risk in a global insurance software solution.
- Improved the localization of the product.

EDUCATION

ESAT, 2018 – 2020

HND IN VIDEO GAMES PROGRAMMING

- **Final Project:** Sun Warriors
Top-Down multiplayer game, focused on a frenetic pace and cooperation. Developed on a multidisciplinary team with art students and musicians. Implemented online multiplayer using Unreal Engine 4 replication system and Steam matchmaking and friend invites.

POLYTECHNIC UNIVERSITY OF VALENCIA, 2012 – 2018

BSC IN COMPUTER SCIENCE

- **Final Project:** Unity 3D Weather Simulation Plugin
System developed for Unity 3D that includes day and night cycles, fully customizable calendar with seasonal changes and weather simulation, affected by the current season. The system was developed with interactivity with other game systems in mind and user customization.

UNIVERSITY OF REYKJAVIK, 2015 – 2016

BSC IN COMPUTER SCIENCE

- Academic year at the University of Reykjavik as an exchange student.

SKILLS

Programming: C++ (Unreal Engine), C# (Unity), Java, Python.

Engines/Tools: Unreal Engine (UE4/UE5, C++, Blueprints, MASS, UMG), Unity (C#, Photon PUN), Git, Perforce, OpenGL/GLSL.

Gameplay: Combat & interaction systems, AI behavior, multiplayer (Unreal replication & Photon), ECS architecture, UI implementation, rapid prototyping.

Platforms & Tools: PlayStation, Xbox, Switch SDK.

Languages: Spanish, Catalan, English.
